                                                                                                                                                                                                                                                                                                                                                                                                 /note-Tvector: pBluescript II SK+; Site_1: EcoRI; Site_2: NhOI; The cDNA library was constructed from mRNA isolated from degenerating cotyledons of 9-10 day old etiolated seedlings for the cultivar Williams. Complementary DNA was poly(dT) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were transformed into the EcoRI-XhoI restriction site were transformed into DH10B host cells (GibcoBRL). This

                                                                                                                                                                                                                                                                                                                                                                                                             from 2 week old seedlings with the cotyledons removed at the time of harvest. The seedlings for the cultivar Raiden were grown in a growth chamber using germination paper. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dT) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments sollowere transformed into DH10B host cells (Gibco BRI). This library was constructed by Dr. Randy . Shoemaker."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                            DЬ
                                                                                                                                                                                                                                                                                         Ş
                                                                                                                                                                                                                                                                                                                                                                                                          CC The invention relates to one hundred and twenty two nucleic acids CC encoding PRO polypeptides. The sequences of the 122 PRO polynucleotides CC encode human secreted proteins. The PRO nucleic acids, polypeptides, CC agonists and antagonists are useful for treating a PRO related disorder. CC The PRO polypeptides are useful for diagnosing tumours, especially lung CC cancer, colon cancer, breast tumour prostate tumour, rectal tumour or CC liver tumour. The PRO polypeptides are useful for stimulating the CC the proliferation of, or gene expression, in pericyte cells, for stimulating the relases of tumour necrosis factor-alpha from human blood, CC for stimulating or inhibiting the proliferation of normal human dearmal CC fibroblast cells. The PRO polypeptide may also be used as molecular CC applications in molecular biology, including use as hybridisation probes, CC and in chromosome and gene mapping. ABK33536-ABK33657 represent human CC PRO protein coding sequences of the invention.

                                    The present sequence encodes an osteoclastogenesis inhibitory factor (OCIF)-binding molecule (OBM). The protein promotes and supports the separation and maturation of osteoclasts in the presence of bone absorption factors such as calcitriol or parathyroid hormone (PTH). OBM is isolated from stroma cells cultured in the presence of a bone absorption factor by separation and solubilisation of membrane proteins then affinity chromatography using OCIF. It exists in a full-sequence form and a solubilised form (sOBM) which is a shorter chain. OBM may be used for screening potential inhibitors and modifiers of its biological activity, and screening for receptors to OBM which mediate its function. These substances can then be used in the treatment of disorders of bone of the protein, for investigative and diagnostic purposes, and as

                                                                 The present sequence encodes an osteoclastogenesis inhibitory factor (OCIF) binding molecule (OBM). The protein promotes and supports the separation and maturation of osteoclasts in the presence of bone absorption factors such as calcitriol or parathyroid hormone (PTH). OBM is isolated from stroma cells cultured in the presence of a bone absorption factor by separation and solubilisation of membrane proteins absorption factor by separation and solubilisation of membrane proteins

           affinity chromatography using OCIF. It exists in a full-sequence and a solubilised form (sOBM) which is a shorter chain. OBM may be for screening potential inhibitors and modifiers of its biological vity, and screening for receptors to OBM which mediate its function

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This cDNA encodes a human RANKL, a ligand for the RANK (receptor activator of necrosis factor-kappaB (NF-kB)) polypeptide. RANK is a commember of the tumour necrosis factor (RNF) family. A soluble RANK comay be used for inhibiting activation of NF-kB, by contacting a cell expressing membrane-associated RANK with a soluble RANK which binds to compare to induce maturation of dendritic cells and enhance their compared to induce maturation of dendritic cells and enhance their compared to induce maturation of dendritic cells and enhance tresponse. The consoluble RANK polypeptides composition may also be used for regulating an immune or inflammatory response. Inhibition of NF-kB by RANK antagonists composed that result from triggering of RANK, e.g. in treating toxic shock or sepsis, graft-versus-host reactions, or acute inflammatory caponses that result from triggering of RANK, e.g. in treating toxic reactions. They can also be used in adjunct therapy for disease contacterised by neoplastic cells that express RANK. RANKL polypeptides can also be used to identify inhibitors of RANK and thus inhibitors of an inflammatory response, and also for protecting RANK antagonists of contacterised by neoplastic cells that express RANK. RANKL polypeptides can also be used to identify inhibitors of fank and thus inhibitors of an inflammatory response, and also for protecting RANK and can inflammatory cells from the negative effects of chemotherapy or the presence of high levels of the presence of high levels contacted the products can also be used for detection and drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RANK ligand (RANKL). The soluble RANK polypeptide composition may also be used for regulating an immune or inflammatory response. Inhibition of NF-kB by RANK antagonists may be useful in ameliorating negative effects of an inflammatory response that result from triggering of RANK, e.g. in treating toxic shock or sepsis, graft-versus host reactions, or acute inflammatory reactions. They can also be used in adjunct therapy for disease characterised by neoplastic cells that express RANK. The products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This cDNA encodes a human RANKL, a ligand for the RANK (receptor activator of necrosis factor-kappaB (NF-kB)) polypeptide. RANK is a member of the tumour necrosis factor (TNF) family. Host cells transformed or transfected with an expression vector comprising the RANK encoding nucleic acid can be used to produce recombinant RANK protein. The soluble RANK may be used for inhibiting activation of NF-kB, by contacting a cell expressing membrane-associated RANK with a soluble RANK which binds to
                                                                                                           AAD15311 standard; cDNA; 954 BP

Human receptor activator of NF kappaB ligand (RANKL) cDNA

15-NOV-2001 (first entry)

```
The patent discloses novel receptor activator of nuclear factor (NF)-CC kappaB (RANK) proteins and their corresponding DNAs. RANK is a member CC of the tumour necrosis factor (TNF) receptor superfamily and associates (CC with TNF receptor associated factor (TRAF) 2 and 3 which are important CC in the regulation of immune and inflammatory response. The receptors CC are useful for regulating immune response and in screening for inhibitors of signal transduction, e.g. for screening the CC molecules that inhibit interaction of RANK with TRAF1, TRAF2, TRAF3, CC TRAF5 and particularly TRAF6. NF-kappaB inhibition by RANK antagonists CC are useful in ameliorating the negative effects of an inflammatory CC response that result from triggering of RANK, e.g. in treating toxic shock or sepsis, graft-versus-host reactions, acute inflammatory CC reactions and the effects of bone resorption. RANK from apoptosis. CC soluble forms of the receptor are used in vivo or in vitro based CC screening tests for agonists or antagonists of RANK acts as an anti-CC adjunct therapy for disease characterised by neoplastic cells that CC express RANK. Compounds that interfere with RANK/TRAF6 interactions are used in the CC are used as inhibitors of disease characterised by neoplastic cells that CC express RANK. Compounds that interfere with RANK/TRAF6 interactions CC are used as inhibitors of disease sassociated with excess bone resorption and activites. They are useful for the expressants or anti-inflammatory agents. The RANK DNAs are used in preparing kits for the detection of soluble RANK, or another RANK. Parak compositions as probes for analysis of the presence or distribution of RANK transcripts, while the proteins CC monitor RANK-related activity. The present sequence is a cDNA encoding thus to the detection of soluble RANK, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New receptor activator of NF-kappaB (RANK) polypeptides, useful for regulating immune response, in screening for RANK inhibitors, or as adjunct the approximately adjunct the approximately approximately the cells that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                23-DEC-1996;

RANK and RANKL are type 1 and type 2 transmembrane proteins respectively. RANK is a member of the tumour necrosis factor (TNF) superfamily and it closely resembles CD40 in the extracellular region. RANK associates with TNF receptor-associated factor (TRAF) 2 and TRAF3. The DNA molecules are useful for producing ligands of RANK. The ligands are useful for regulating immune response and in screening for inhibitors of RANK. The present sequence is human RANKL (huranKL)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Inhibition of Nf-kappaB by RANK antagonists is useful in ameliorating negative effects of inflammatory reactions, and the effects of excess bone resorption. The RANK DNAs, proteins and their analogues are useful for the preparation of pharmaceutical compositions, for infecting target cells for use in gene therapy applications in diagnosing diseases associated with RANK, and as targets for use in screening assays. They may be used in the treatment or diagnosis of immune system dysfunction. The present invention also encompasses gene therapy methods to correct gene-activating mutations, associated with e.g. familial expansile osteolysis (FEO) and early onset paget's disease of bone (EP). The present sequence is a cDNA encoding full-length human RANKL (hurankl) protein. The RANKL gene is located in chromosome 13q14.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a novel receptor, referred to as RANK (receptor activator of NF (nuclear factor)-kappaB), a member of TNF (tumour necrosis factor) receptor superfamily. RANK is a Type I transmembrane protein that interacts with TNF receptor-associated factors (TRAFS). Triggering of RANK by overexpression or co-expression of RANK and membrane bound RANK ligand (RANKL) results in upregulation of the transcription factor NF-kappaB, a ubiquitous transcription factor that is most extensively utilised in cells of the immune system.
                                                                                                                                             cDNA encoding human TRANCE protein splice variant 2.

                                                                                                                                                                                                                                                                                           (TRANCE)-modulating agent. The method is useful for treating a mammal having a disorder comprising insufficient or excessive cartilage or skeletal growth, where the disorder comprising insufficient cartilage or skeletal growth is selected from dwarfism, osteopetrosis, craniofacial-skeletal discrepancies and one or cartilage damage resulting from traumatic injury, surgery, osteoarthritis or rheumatoid arthritis, and disorders comprising excessive cartilage or skeletal growth are selected from acromegaly, gigantism, exostosis, carilaginea, exostosis bursata and multiple osteocartilaginous exostoses. The method is useful for inhibiting chondrocyte differentiation. The present nucleic acid sequence encodes the human TRANCE protein, splice variant 2, of the invention. TRANCE is a member of the tumour necrosis factor family and acts directly on cartilage-producing cells (chondrocytes)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             misc_feature

     the mammal a tumour necrosis factor-related activation induced cytokin (TRANCE)-modulating agent. The method is useful for treating a mammal having a disorder comprising insufficient or excessive carrilage or skeletal growth, where the disorder comprising insufficient cartilage or skeletal growth is selected from dwarfism, osteopetrosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TRANCE; dwarfism; osteopetrosis; craniofacial-skeletal discrepancy; bone damage; cartilage damage; traumatic injury; surgery; osteoarthrit rheumatoid arthritis; acromegaly; gigantism; exostosis; carilaginea; exostosis bursata; multiple osteocartilaginous exostosis; chondrocyte;

The method is useful for inhibiting chondrocyte differentiation. The present nucleic acid sequence encodes the human TRANCE protein, splice variant 1, of the invention. TRANCE is a member of the tumour necrosis factor feature and acted affector.
                                                                                                                                                                                                        WO200015807-A1.

Osteoprotegerin is a secreted member of the tumour necrosis factor receptor family, which blocks osteoclastogenesis in a dose dependent manner. The OPGL protein is synthesised as a type II transmembrane protein. The murine and human OPGL polypeptides are 87% homologous. OPGL is a potent osteoclast differentiation factor when combined with CSF-1. It is not capable of inducing osteoclast differentiation in the absence of CSF-1. OPGL is also an activator of mature osteoclasts. The specification describes a method for the in vivo down-regulation of OPGL activity in an animal. The method comprises using at least one OPGL polypeptide or subsequence, and/or at least one OPGL analogue to induce the content of the con

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              encoding OPG binding protein are used to produce recombinant OPG binding protein. OPG binding protein is used in binding assays to determine osteoprotegrin (OG) in biological samples; to screen for specific binding agents (particularly agonists and antagonists, including intracellular proteins); to raise Ab (useful in immunoassays for detection of OPG binding protein) and to identify compounds that modulate binding of OPG binding protein to osteoclast differentiation and activation receptor (ODAR). The nucleic acid molecule encoding OPG binding protein can be used to detect OPG binding protein-encoding sequences, e.g. screening for related sequences, also to produce transgenic animal models, while complementary sequences are used for antisense regulation of OPG binding protein expression. Modulators of OPG binding protein, particularly soluble forms of OPG binding protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acid encoding osteoprotegrin binding protein – useful for, e.g. treating bone diseases by modulating osteoclast differentiation and for diagnosis \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       30-MAR-1998;

                                                                                                                                             polypeptides and the polynucleotide sequences encoding them. The PRO polypeptides, agonists, antagonists or anti-PRO antibodies are useful for treating benign or malignant tumours (e.g. renal, kidney, bladder, breast, etc.), leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic, glandular, macrophagal, stromal and blastocoelic disorders, inflammatory, immune and angiogenic disorders. The polynucleotide sequences are also useful in gene therapy. ABK40254-ABK40288 encode for the human PRO

                                        The present sequence encodes human TNF-related activation induced cytokines (TRANCE). Human or murine TRANCE polypeptides or their variants, fragments, derivatives or analogues may be used as modulators of immune response in a mammal comprising, antisense sequences to TRANCE and fusion proteins comprising human and/or murine TRANCE. Agonists and antagonists of TRANCE, can be used to modulate immune response by increasing or decreasing the life span of mature dendritic cells and increasing or decreasing T cell activation. These techniques are especially useful for treating immune system related conditions such as HIV, cancer, autoimmune disease or hypersensitivity to an allergen. The TRANCE polypeptides can be used to increase the viability of dendritic cells in vivo or in vitro, especially when used in conjunction with proteins of the tumour necrosis factor (TNF) superfamily (especially confirmance).

The present sequence is the coding sequence for rat Osteoclast Differentiation Factor (ODF). ODF is thought to be directly involved in the differentiation of monocytes/narcophages into osteoclasts. Osteoclasts promote dissolution of the bone matrix and solubilisation of bone salts. The present sequence is useful in gene therapy, and as hybridisation probes or primers. ODF protein is useful for modulating the

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Oscegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-521D12. Actual start of this clone is at base position 1 of RP11-95D17; actual end is at base position 190748 of RP11-95D17. (http://bacpac.med.buffalo.edu) рвасез.6

There are polymorphic base differences between RP11-95D17 and the redundant clone AC062035. Data from AC062035 was used to finish redundant clone AC062035. Data from AC062035 was used

RP11-95D17

may not be represented Unresolved tandem repeat from base position 181200 to 187300. Six information from restriction digest suggests that the full repeat
